

Perx Health

The Perx vision is to reduce health care costs while improving patient lives by genuinely exciting people about their health. Poor self-management of chronic disease is the biggest hidden problem in healthcare - its a big problem to crack matched by our big ambition.

We've got big ambition to change how health is delivered – get on board if you want to use your skills to make a fun product that has huge impact on people's health!

We are looking for a seasoned Web developer to join us full-time to make a product that people love to use.

You will:

- Help solve healthcare's hidden problem by applying your skills and ingenuity
- Own your work and be completely responsible for our website, internal dashboards and external web assets
- Collaborate with the founders and our growing engineering team
- Prototype quickly, move beyond your comfort zone and ship what you create

You must have:

- Experience building modern web applications
- Ability to build features both quickly and sustainably, always keeping an eye out the future problems
- Good problem-solving skills and clear communication with team mates (e.g., for API specifications or group solution design)
- Deep understanding of object-oriented programming and the MVC framework
- A solid understanding of authentication, security and privacy
- Current industry knowledge to leverage the best tools to do the job at hand
- Excitement for our mission to save lives through a more motivating way to help people form healthy habits

Nice to have:

- Experience with any of the following: Node.js, ES6, PostgreSQL, Express, React, Redux, CSS Modules, Webpack Node.js, Express.js, Webpack, Auth0, Full-Stack Web Development (Node/Redux/React)
- Comfort using AWS, Auth0 and Git
- Any prior experiences in native iOS/Android development
- An interest in Machine Learning or Data Science with real-world implementations
- Experience with React Native
- A good sense of humour
